

Warning: The two described PCR tests may produce positive test results with *P. paracitricarpa* and *P. citriasiana*. In the event of a positive PCR test results, culturing of the fungus and multi-locus sequencing as described in Guarnaccia *et al.* (2017) is needed in order to achieve reliable identification of *P. citricarpa*. Please note that a revision of the protocol on *Phyllosticta citricarpa* (formerly *Guignardia citricarpa*) is in progress.
